Helmets

light gray/red

light blue/blue

black/black

Vespa SOFT TOUCH

The Vespa Soft Touch helmet is a classic, light jet helmet. It is handmade, accented with textured leather, sewn directly on the shell with a special patented system. The transparent peak is a new and exclusive design, and the Vespa logo is embroidered on the left side of the helmet. "Soft touch" refers to the name of the painting process, which provides a smooth and matte finish.

Four color combinations (matte color plus leather detail) are available: black/black, dark gray/black, light gray/red, light blue/light blue. The basic yet coordinated helmet colors allow for better matching—to one's vehicle(s) and/or clothing. The style and colors also make mixing and matching helmets (for a second rider) very simple.

The Soft Touch helmet is made of a thermoplastic material (polycarbonate) with two different shell dimensions for small and large sizes, which allows for a better fit while maintaining the optimal safety thickness inside. The peak is made of unbreakable polycarbonate. Inside is high-quality hypoallergenic Terinda fabric (Dupont patented). The helmet has the classic steel side ring to hook it on the vehicle.

An option is a special visor, in plastic tinted material, which can be fitted with two spinets hidden inside the helmet. Available in four colors: transparent, fumè, yellow and blue.

Part numbers are determined by replacing "xx" with the corresponding code for size and color from the chart on the right.

dark gray/black

Vespa Soft Touch 605013M0xx \$275	XS	S	M	L	XL

light gray/red	18	28	38	48	58
light blue/blue	1Z	2Z	3Z	4Z	5Z

Piaggio COPTER

The Piaggio Copter helmet is available in four color combinations (matte color plus eco-leather detail): black/black, light gray/black, white/blue, light gray/red. The basic yet coordinated helmet colors allow for better matching—to one's vehicle(s) and/or clothing. The style and colors also make mixing and matching helmets (for a second rider) very simple.

The Copter is made in two different shell dimensions for small sizes (up to M) and large sizes in order to ensure the best safety standards as well as the best comfort for the rider. The internal lining is made of high-quality hyperallergic Terinda material (Dupont patent). The helmet has a classic steel ring to hook it to a vehicle. It is homologated following the ECE 22.05 regulation.

Part numbers for Piaggio Copter helmets are determined by replacing "xx" with the corresponding code for size and color from the chart on the right.
